

## JPA – Backend und Angular

- CORS

```
@Provider
public class CORSFilter implements ContainerResponseFilter {
    @Override
    public void filter(final ContainerRequestContext requestContext, final ContainerResponseContext cres)
        throws IOException {
        cres.getHeaders().add("Access-Control-Allow-Origin", "*");
        cres.getHeaders().add("Access-Control-Allow-Headers", "origin, content-type, accept, authorization");
        cres.getHeaders().add("Access-Control-Allow-Credentials", "true");
        cres.getHeaders().add("Access-Control-Allow-Methods", "GET, POST, PUT, DELETE, OPTIONS, HEAD");
        cres.getHeaders().add("Access-Control-Max-Age", "1209600");
    }
}
```

- Dropdown

```
<select (change)="setState($event.target.value)" name="stateName">
  <option [selected]="toInsert.description.length == 0">Select State</option>
  <option *ngFor="let state of stateList | async">
    {{state.stateName}}
  </option>
</select>
```
